

DPM easyCipher

Updates in DPM easyCipher v3.0.6.0

Release date: 1-Sep-2023

The following changes have been performed since v3.0.5.0 of DPM easyCipher:

New features:

1. Support TLS connection to Active Directory
2. Added more reasons for key revocation
3. Automatically revoke keys on preset deactivation date
4. Added Search field when importing AD groups for Policy
5. Added ability to modify deactivation date for existing key

Improvements:

1. Display compromise and destroy dates for keys in key properties
2. Fixed Incorrect detection of Linux OS for device group
3. Fixed issue of AD users not being imported when importing AD group if there are more than 1000 groups in Active Directory
4. Fixed issue of incorrect group policy if using MS SQL Server backend database
5. Fixed warnings in the browser of Reporting Mixed Content
6. Sort AD groups alphabetically when importing policy user groups from Active Directory
7. Improved audit information for key operations

Other changes:

1. Log file configuration is moved to conf folder
2. Buttons in Key Management are shown disabled instead of removing buttons for non-available operations
3. Added hostname to the top to identify instance easier
4. Added product name to the top
5. Upgraded the following dependency libraries:
 - Log4j to v2.20.0
 - mssql-jdbc to v12.2.0.jre8
